

Environmental Policy

XAMAX conducts its business in an environmentally responsible and innovative manner. We endeavor to be good corporate stewards of the resources throughout the entire supply chain and look for new ways to minimize the environmental impact of our products and services.

Our commitment is to continuously improve in the following areas:

Energy Consumption

We reduce energy usage and emissions from facilities and equipment through efficient operations and energy management.

Waste Reduction

We maximize the use of our materials and carefully monitor sources of scrap and waste. We strive to minimize the generation of unnecessary paper when the information can be stored in an electronic format.

Environmental Hazards

We monitor the use, safety and disposal of any materials that have inherent environmental concerns. Every effort is made to eliminate potential hazards with environmentally friendly alternatives.

Responsible Sourcing

We develop our suppliers to share the **XAMAX** environmental commitments while minimizing unnecessary transportation costs in the supply chain.

Regulatory Cooperation

We partner with our local community and government agencies to take advantage of their expertise and build close relationships in environmental stewardship and are committed to legal compliance.

ESG

We participate in ESG initiatives and where applicable report as needed, including but not limited to GHG emissions/carbon footprint.

XAMAX manages its environmental programs as part of the overall ISO 9001 Quality Management Systems.
